**VERIS INDUSTRIES RELEASES ENHANCED MINI H608 CURRENT SWITCH WITH THREE TIMES THE AMPERAGE CAPACITY**

**PORTLAND, OR – January 15, 2010** – Veris Industries released the enhanced H608 adjustable trip point current switch with three times the amperage capacity of the previous H608 now at 175A. The H608 also boasts the lowest turn on in the industry at 0.5A. One H608 does the job of what would take numerous competitive products, accurately monitoring current on 1/8 to 44 horsepower motors.

Troy Wecker, Hawkeye Product Manager, stated “Veris prides itself in listening to what our customers need and going above and beyond to provide it. The H608 enhancement is no exception, being initiated by a customer request. Customers are continually looking for products that serve multiple applications. With a turn on of 0.5A and a current capacity of 175A the new H608 allows customers to use one product for small to large motors reducing the number of products needed to complete a job.”

The enhanced H608 is not only mini in size, fitting easily into tight enclosures, but simplifies installation. The time consuming task of wire wrapping in order to get an accurate current rating on small motors is eliminated with the H608’s 0.5A turn on. The enhanced H608 sets a new standard in mini current switch monitoring, once again setting Veris apart from the competition.

**About Veris Industries**

Veris Industries is a premier provider of energy and environmental sensor products, and is recognized for setting new standards in customer service and product innovation. For additional information on the H308, or any of Veris’ industry leading products please call 1.800.354.8556 or send an email to [sales@veris.com](mailto:sales@veris.com)
